The stability of the API (active pharmaceutical ingredient) in the respective concentrations in SUSYsystem is solely a recommendation based on the composition of the SUmir and SYmir vehicles and the stability studies of the available scientific bibliography. Several factors can condition the final stability of the product (i.e. origin of the API, concentration, storage recipient, preparation method, conservation method, etc.) so that Ministério dos Remédios® cannot be held responsible for the safety, efficacy our bioavailability of the compounded products. The support scientific bibliography may be made available upon professional solicitation. The content of this document is solely informative, being that the preparation, distribution and administration of the compounded products depicted are entirely the pharmacist and physicians responsibility. Ministério dos Remédios® may not be held responsible by any case of formulation or information present in this document.
